

## Cobalt - Drill Bits

### Metric

Cobalt Drill Bits are ideal for drilling into Stainless Steel or High Tensile Steel.

135° Split Point (crankshaft point). The 135° Split point is self centering and the short distance from the drill axis to the outer corners results in faster penetration, reducing the need for end thrust.

Bronze Finish (gold oxide) surface treatment. The metallic brown coloured low temperature temper treatment is normally only used on cobalt tools for identification purposes.
