

## Driver Bits

### Pozidrive

Pozidrive (PZ) insert bits are self-centering for fast, efficient assembly operations.

Superior magnetism helps the bit grip the screw and prevent cam-out.

Manufactured from heat treated alloy to offer full body hardness  
for longer service life and less wear.

A compression forged tip provides an ideal fit and reduces breakage.

\*\* Insert bits (25mm) are not magnetic.

They achieve magnetism when used in magnetic bit holders.

\*\* Driver bits with a length of 50mm and over have the universal 1/4 hex shank.

The 1/4 hex shank is suitable for use in most power tools, adapters, extensions and quick change holders.
